2 TAP

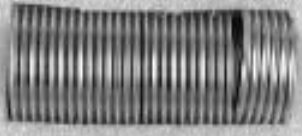

Use the specified tap to cut the holding thread into the cleaned hole. When tapping a hole, it is recommended to use a suitable lubricant.

5 DONE!

You have successfully repaired your damaged thread. The new thread is normally stronger than the original.

Use the installation tool to wind the threaded hole using light downward pressure until 1/8" below the surface.

Now, Do not work against the threaded installation as the hole may break off.

2 TAP
Use the specified tap to tap the existing thread into the damaged hole. When tapping a hole, it is recommended to use a suitable lubricant.
Note: Use a counter-drill to create a hole of 25 mm diameter and depth 10 mm. This will ensure the tap can reach the bottom of the hole and create a clean hole.

Use the installation tool to wind the thread into the threaded hole using light downward pressure until half a turn before the surface.
Note: Do not overtighten the thread otherwise the long tap break off.

5 DONE!
You have successfully repaired your damaged thread. The new thread is normally stronger than the original.
